ELECTRONIC BODY

THE CURE OF DIABETES

There are more than 43 diabetic patients cured and, according to Dr. Fernando Morales' investigations, this is possible when we understand our body electric process. Our body is totally electronic; we function on the basis of electricity; our nervous system carries on our body's electricity, Dr. Morales affirmed. But not only the human body is electronic; all living beings with a nervous system are electronic.

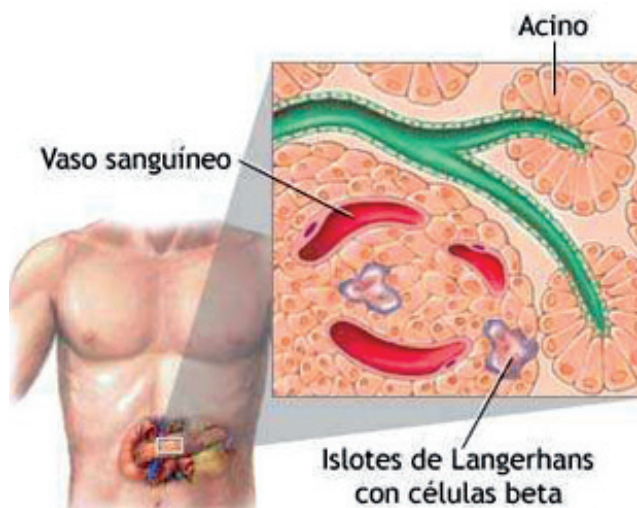

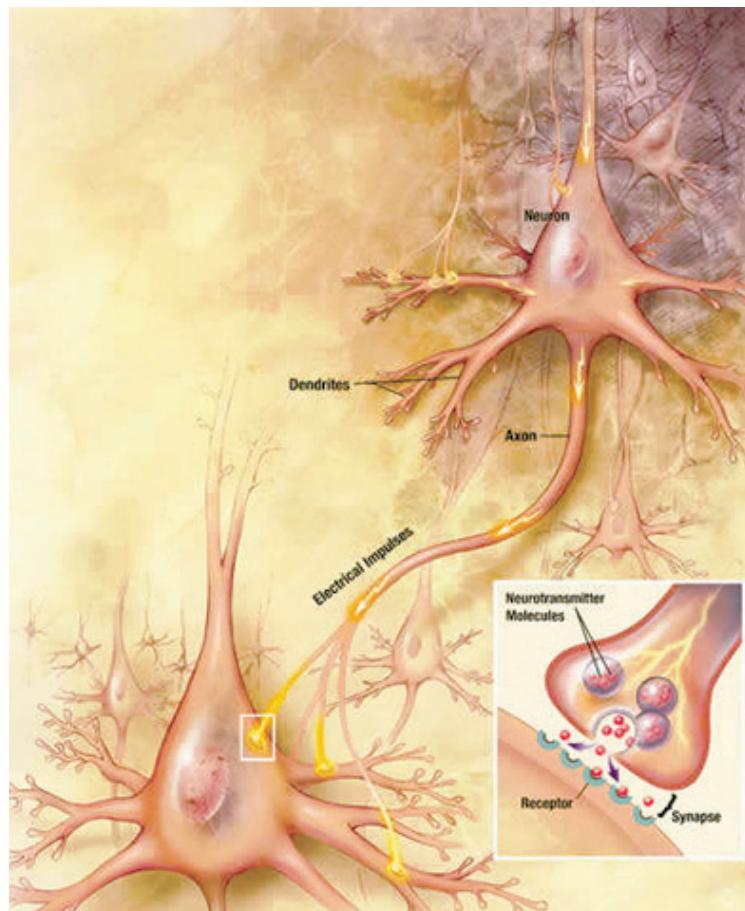

THE DIABETES THEORY

According to recent studies on Diabetes cure made by Dr. Morales, the Beta Cells of the Pancreas in charge of producing Insulin are reconnecting; like with Vitiligo, the free nervous terminals in charge of carrying the impulse to the Langerhans Cells are not dead nor destroyed, as other theories may affirm; they are just disconnected or inactive and cannot work and produce Glucagon, Insulin and Somatostatin

CAUSES OF THE DIABETES DISEASE

The Diabetes disease may appear when a very strong emotional impact or shock affects our lives, or simply when something makes us feel very angry; the feeling of anger causes an increment of Corticotropin that causes a rise on the Adrenalin and Cortisol which are the physiology of panic or fear; the increment of adrenalin causes detachment or disconnection of the free nervous terminals, leaving without impulses the Langerhans cells that lose their function; the Langerhans cells, like the melanocytes, are intact but disconnected; for this reason the cells cannot function normally even if they are alive; they are not dead nor destroyed, they are just disconnected or inactive, their re-innervation makes the cells re-initiate their usual function and then everything comes to normal.

The lack of function in the melanocytes known as Vitiligo, and the lack of it in the Langerhans cells determines the appearance of Diabetes. There are more cells in reconnection, like in the case of Alopecia Areata at the pilose follicle level, and many others discovered after this study.

Alopecia Areata Cure:

¿WHAT DOES ALOPECIA AREATA MEAN?

Alopecia Areata is a disease that affects the pilose follicles; these are skin areas that allow our hair growth. In most cases our hair may fall down by tufts, leaving without hair some areas with the size of a twenty-five cents coin. Many persons with this disease have just a few bald areas. However, some people can lose more hair. And, even if not common, this disease may cause a total loss of the face and body hair. (NIAMS)

CAUSES:

In his studies, Dr. Fernando Morales affirms that Alopecia Areata is eminently nervous; he says that it is a disconnection of the pilose follicles (dermic papilla) due to a high tension of the human body such as Vitiligo and Diabetes, impressions that may affect the tension of our body, in the understanding that our body is electronic. According to Dr. Morales, the rise of Adrenalin is the cause of hair loss, because of lack of electric impulses under the Pilose Follicles.

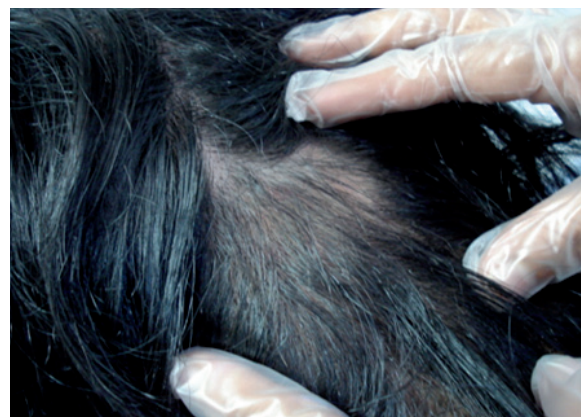

As per Dr. Morales remarks, the cure of this disease is now a fact; we have patients that have been cured and we will tell the medic world about this discovery, he affirms. The pilose follicles are not destroyed or dead, they are only disconnected and their re-connection has been a complete success, Dr. Morales says.

A CURE FOR VITILIGO

After several years of research, Dr. Fernando Morales started treatment of his Vitiligo patients getting a satisfactory outcome in the cure of Vitiligo and Diabetes diseases.

After complete treatment and recovery (six months as an average) of his first patient, Dr. Morales continued with the successful treatment of several other patients and, all patients under treatment were in the process of healing. Dr. Fernando Morales said, "six months ago, we had eight patients under treatment. After the cure of the first patient, we had ninety patients looking for a cure. Today, we have more than 1400 patients in the process of healing".

The treatment consists of drugs and heat therapies recombination developed by Dr. Morales with excellent results. The average curing period is six to twelve months, depending on each particular case.

It is thanks to Dr. Morales' studies on the Physiopathology of Vitiligo that we can now understand the cause of this disease. According to Dr. Morales, present theories on Vitiligo are wrong, and to realize this fact helped him to find the answers. It is based on a thorough investigation and getting to the bottom of the topic, that I am sure that melanocytes are not destroyed, they don't die either, as previous theories confirm; they remain alive but inactive due to a sudden adrenalin rise as a result of an intense shock or a fright or a phobia we may suffer in certain moments of our lives.

The melanocytes and all basal cells of the epidermis are connected with the neurons of the peripheral nervous system by the synapse produced by them; in this way, they carry the nervous impulses that cause the proper work of all basal cells of our epidermis; besides, the rise of adrenalin may cause detachment of the synaptic processes because of lack of partial oxygenation, causing a fall of the neuronal net to the collagenous fiber where it stays trapped (according to Dr. Fernando Morales' theory).

The foregoing confirms that the Melanocytes are not dead; they just remain inactive in the basal layer like other cells that may suffer the same process. The human body is activated by electric impulses, and for that reason we found a cure for diseases such as Vitiligo, Diabetes, Alopecia and others being studied at present.

VITÍLIGO Case treated by Dr. Fernando Morales

VITÍLIGO

iAn Electronic Body!

The human body is eminently electronic; it means that our body may function due to electric impulses coming from the central nervous system, being very important the free nervous terminations that carry the body electricity to the littlest spaces of our body.

The cell works with electric impulses; so the kind of disease will depend on the cell affected, Dr. Morales says; disconnection of the Melanocytes will determine the Vitiligo disease; high tension will determine Cinderella Dermatitis; disconnection of the Langerhans Cell will determine Diabetes disease; high tension will determine Hypoglycemia; recognition of the disease will depend on which cell is affected, Dr. Morales affirms. Disconnection of the pilose follicles will produce Alopecia Areata or Baldness; we already have patients in the process of healing, Dr. Morales says. (A study legally protected by the author).

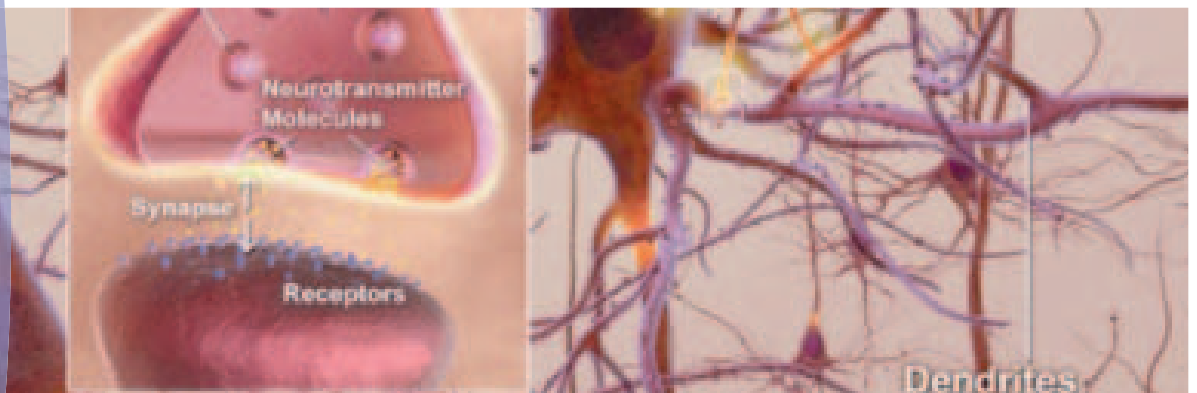

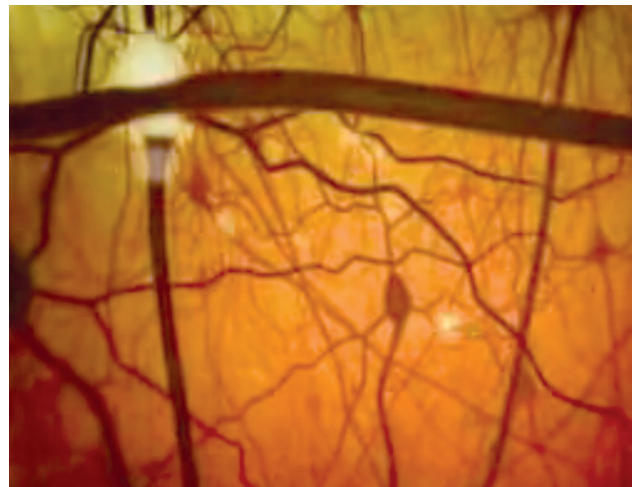

As a sample, a clock battery can be recharged today by our body; that's something we already know, but still don't understand; for example, when a doctor orders an Electrocardiogram, what does it mean? Electricity that comes from the heart and can be materialized on a piece of paper we can touch; an electroencephalogram is the same, and an electromyogram is also the same; but, what does it mean? does it mean?

OUR BODY IS ELECTRONIC.

We must learn about disconnections, high tension and cell deactivation, Dr. Morales says. After the present study, there are more cells which function we are in the process of understanding and discovering.

Our human body is electronic, it is a world in itself, Dr. Morales says; we have more than 100 billion cells, all of them working by electric impulses and electric charges, electrons, protons and neutrons, he says. The present discovery is for the world, and we hope it will be welcomed by the medical community.

¿Which is the relationship between Vitiligo and Diabetes?

When we refer to Vitiligo, we must also mention neurocellular disconnections or disinnervations due to the adrenalin rise of Melanocytes and final nervous system which would be the free nervous terminations.

The lack of function in the melanocytes will be known as Vitiligo, and the lack of function of the Langerhans Cells in the pancreas will determine the Diabetes disease due to absence of electric or nervous impulses.

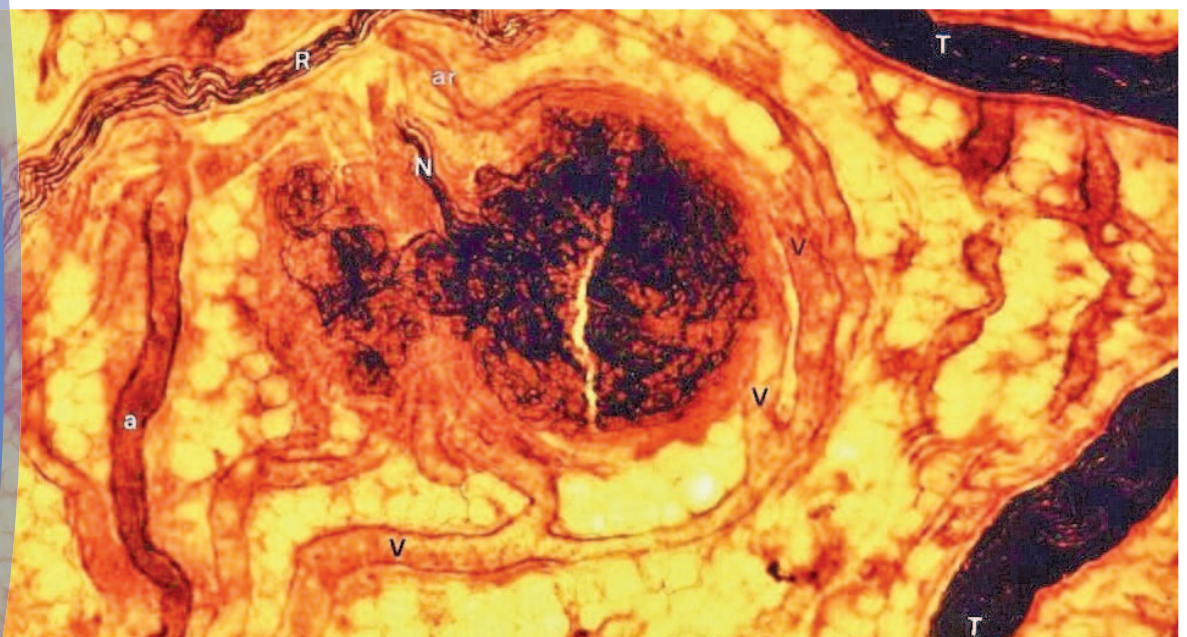

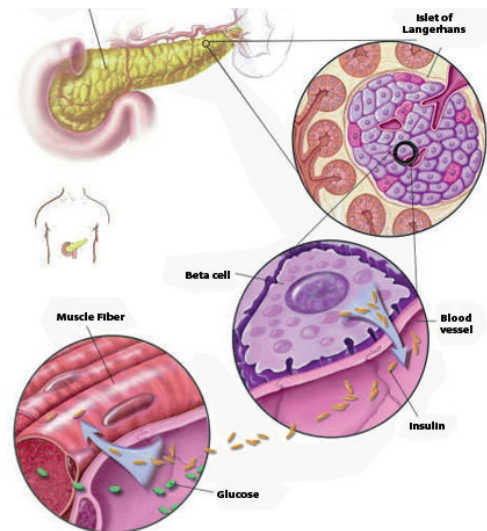

¿Where are those free nervous terminals?

In our hands, because we feel more sensations when touching; feet, because like with our hands we can feel or perceive when we are standing on the ground; mouth, because we can express love when kissing, and feel sensations of love, tenderness and sexual sensations increased in genitals, rectum, and inside our body.

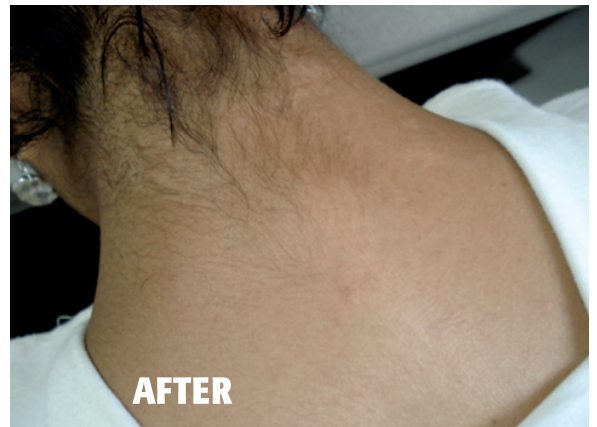

THE PANCREAS

The pancreas is full of free nervous terminations that carry impulses to cells so that they may produce insulin and function; this means that disconnection of the pancreas cause Diabetes (according to Dr. Morales' theory).

Causes of Vitiligo, Diabetes, Alopecia Areata

In general, these diseases are a result of the strong impressions or extremes that may affect all processes causing tension body, for example:

- Extreme fear
- Assault
- Kidnapping
- Extreme anger
- Dog bite
- Extreme sports
- Fright by a clown
- Moving to other house
- Fall and violent blow
- Bicycle collision
- Family problems
- Moving to other country
- Vaccines or injections
- Separation
- Accident
- Stress
- Infidelity
- Earthquake
- Death of relatives
- Family abuse
- To be fired
- Extortion
- Fear of animals such as snakes, spiders, mice, etc.

This theory is legally protected by the author.

How to prepare lime blossom tea:

It is important to add Lime Blossom Tea to accelerate treatment; you have to start the 5th day of medication; you must drink one to two cups at 6:00 PM or later; we suggest you to use the natural blossom but you may use tea bags if finding blossoms is not easy; the tea must be concentrated (24 blossoms per liter).

Must be prepared to suit the patient, in the case of diabetic patients should be **Sugar Pamela**. You can combine it with pink hibiscus if you like and can be drunk hot or cold.

How to keep your body

We suggest relaxing activities for both vitiligo and diabetes patients, such as massage, to watch movies, going out with friends, etc.

warm during treatment:

You must bath with lukewarm water, cold water must be avoided. For vitiligo patients we suggest taking eventual vapor baths, thermal or tub baths (you must warm your body as much as possible while avoiding to be burned).

Other options that provide support to the cure of vitiligo patients are: Heating pads, special heat gels to be applied during 20 minutes. In addition, heat lamps or hot bags in order to warm the body up.

Sunbathing in the morning for 20 to 30 minutes is recommended for vitiligo patients.

How to exercise during treatment:

For young and vigorous patients, we recommend jogging in the morning or exercising in the gym every day. For older patients who cannot run or exercise, we recommend taking a walk 15 minutes a day in the morning or afternoon.

We wish you to complete your treatment successfully

If you have any question or difficulty in your treatment, please contact Dr. Morales. If you get a busy answer, please leave a message including name and phone number. We will return the call as soon as possible.

*Explain if you are a national or international patient in treatment, in order to give due priority to your call.

Do not forget to bring your prescription for a follow-up.

Dr. Fernando Morales takes care of his patients in Guatemala City, but we have patients in countries like Canadá, EE. UU., México, Centro América, Colombia, Venezuela, Perú, Chile, Australia, Italia, Pakistán, China, República Dominicana, España, Francia, Arabia Saudita, Hong Kong y Brasil who are evaluated using photos or video via Internet.

"Call to me and I will answer you and tell you great and unsearchable things you do not know"
